videos or from reading the short article in the book. If you don't want to create a paragraph, you can list 5 things you learned from the videos. After creating your thread, **reply to someone else's thread**. Your response must be 3-5 sentences long.

RULES:

- You must create a thread with your answers to the questions above.
- **You must reply to one of your colleagues' posts.** * You will only receive full credit if you create a thread and then reply to someone else's thread.
- You are allowed to delete your own posts as long as no one has replied to them yet.
- You are allowed to edit your own posts
- You are not allowed to attach files.
- If you do not know how to create a thread or work with discussion boards, ask me, and we can have a video call.

Before reading the introduction to the Linux command book and watching these videos, I did not know how deeply open-source software shaped the technology world. Starting with GitHub is a repository where code is stored and shared among different types of people. I learned that Linux is based Unix, that GNU and Linux are closely connected, and that both are open sources I knew Linux was but not GNU. It surprised me that open source was started by students my age and then shared among a lot of people freely around the globe, over time taking over the world. I also didn't know that you could download a company's modeling program and use it for your own platform as a steppingstone to building a project. Another thing that stood out to me was learning that Android uses a modify version of Linux, which means open source is powering the phones of 2 billion people around the world. Even though I'm a Gamer who uses GitHub to play video game emulators, I never stopped to think about how big companies like Walmart and Exxon have also open sourced some of their things.
